

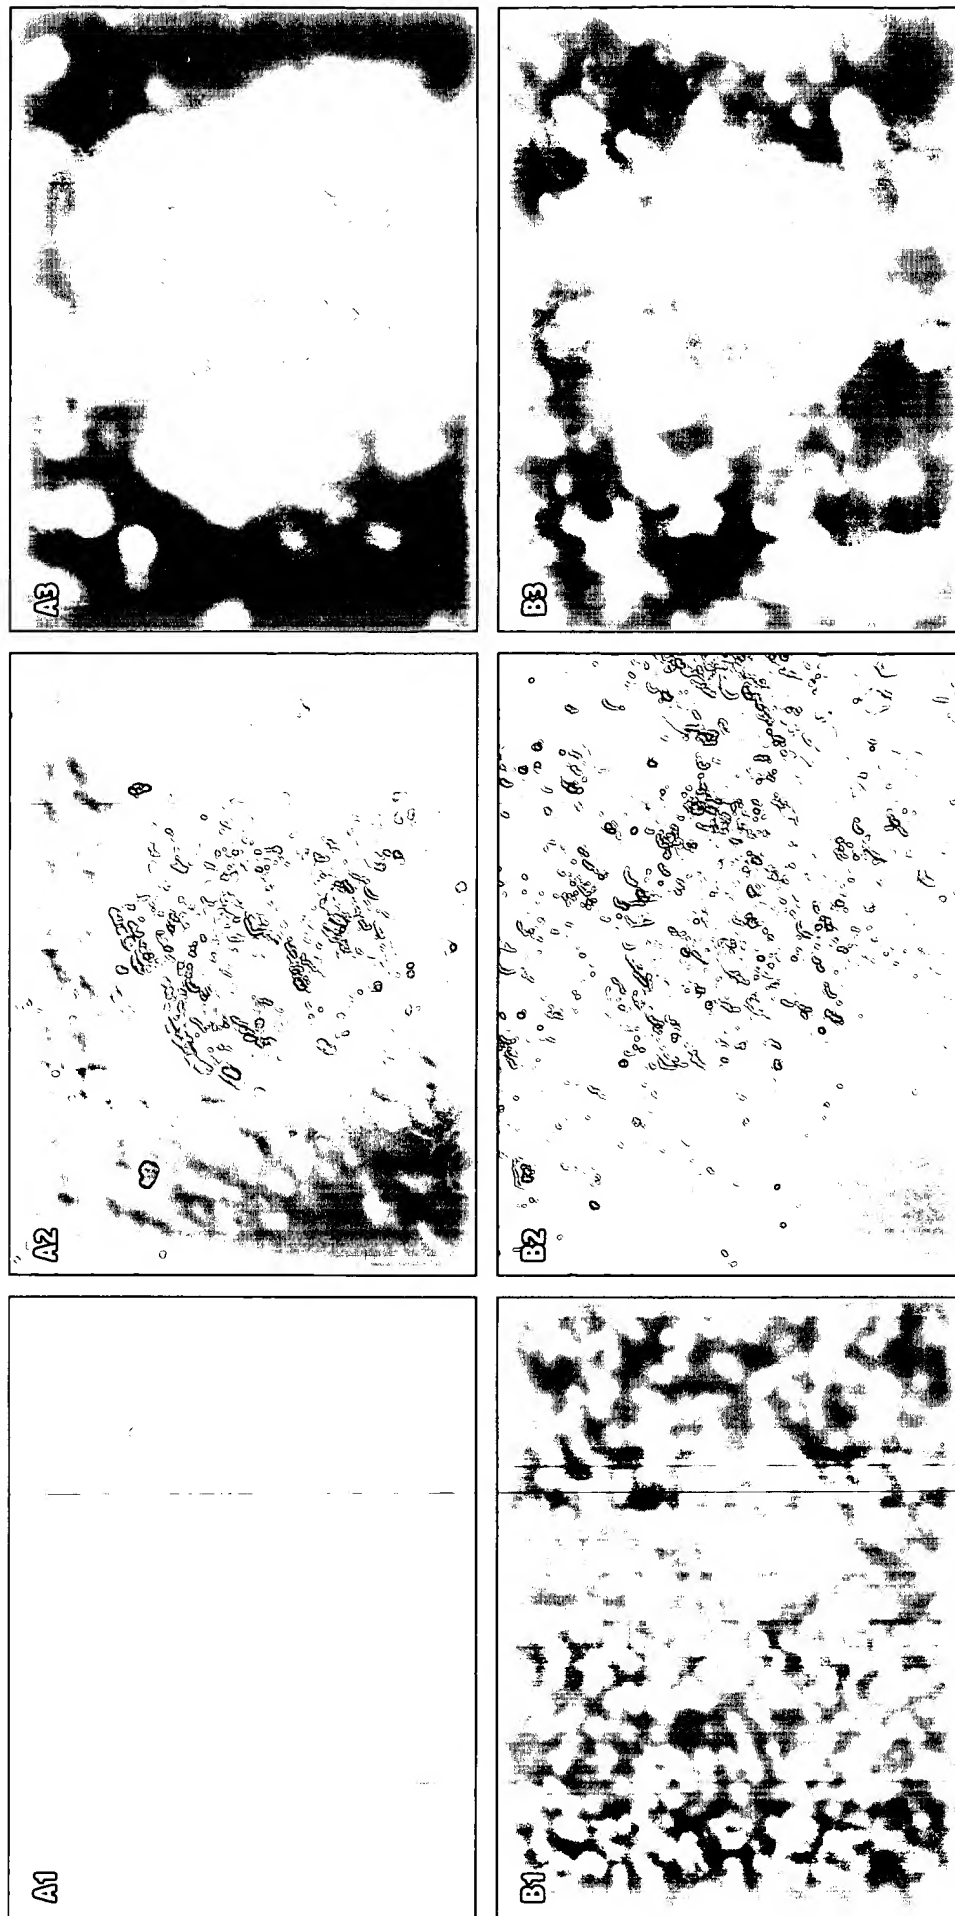

Figure 1. EMA-1 antibody staining on mouse ES cells. Panels A and B denote two different cultures. A1 and B1 – DAPI stained images of mouse ES cell clusters. A2 and B2 – Phase contrast images of mouse ES cell clusters. A3 and B3 – Positive FITC signal on mouse ES cells.

Figure 3. EMA-1 antibody staining on freshly collected chicken PGCs. Panels A and B denote two different treatments. A1 and B1 - DAPI stained images of fresh PGCs. A2 and B2 - Positive FITC signal on PGCs. Note arrow-heads on DAPI stained PGCs in A1 that correspond to PGCs showing positive FITC signal in A2.
